

New Michigan Fertilizer Legislation Restricts Phosphorus Applications on Turf

Beginning **January 1, 2012**, phosphorus fertilizer applications are restricted on residential and commercial lawns in Michigan, including athletic fields and golf courses statewide. This includes applications by both homeowners and commercial applicators.

The general rule in [Public Act 299 of 2010](#) (Act 299) is no phosphorus fertilizer may be applied on residential or commercial lawns, unless it meets an exemption. The sale of phosphorus fertilizers in the marketplace is not impacted. Phosphorus applications for agriculture, gardens, trees, and shrubs are exempted; the restrictions are identified below.

Act 299 Highlights:

- Starting January 1, 2012, a person shall not apply any fertilizer with available phosphate (P₂O₅) to turf. Available phosphate (P₂O₅) may be applied at **specified rates** under the following instances:
 - When a soil test or plant tissue test indicates phosphorus is needed;
 - For new turf establishment using seed or sod;
 - A finished sewage sludge (biosolid), organic manure or a manipulated manure (like compost). The application rate is limited to 0.25 pounds of phosphorus per 1,000 square feet.
 - On golf courses whose manager(s) have completed a Michigan Department of Agriculture and Rural Development (MDARD) approved training program.
- [Local phosphorus fertilizer ordinances](#) in existence before December 16, 2010 are grandfathered.
- Fertilizer cannot be applied to frozen soil or soil saturated with water.
- Any fertilizer released onto a hard surface, such as a sidewalk or driveway must be cleaned up promptly.
- The other phosphorus provisions in Act 299 include new definitions, setbacks from surface water, \$50 civil fines and outreach information.
